

QUICK-ASSEMBLY ENTRANCE UNITS

EUROPEAN PATENT APPLICATION

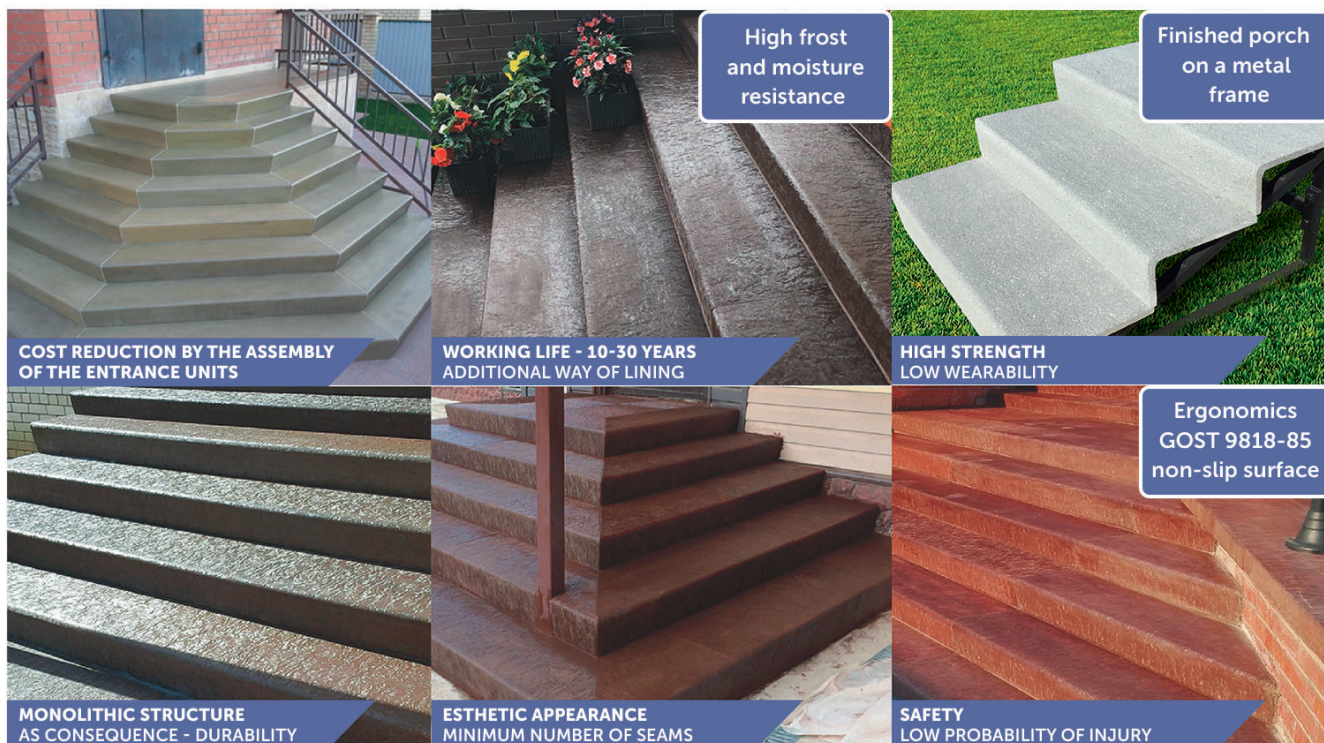

QUICK AND LONG TERM WAY OF STEPS LINING

Thin-walled C3 linings contain a tread run and riser combined at an acute angle, made of a high-strength concrete composite of complex composition on a granite filler, which forms an antislip front surface.

This design allows you to increase the life cycle of the facing element of the stairs due to the lack of a junction between the tread run and the riser, which performs the function of an additional strengthening rib.

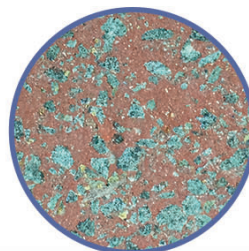

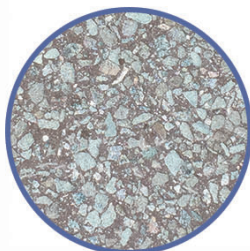

**ANTI-SLIP
SURFACE** 

DIFFERENCE FROM CERAMIC TILE, PAVING SLABS, CLINKER:

- joint between tread run and riser (in this place there is appearing a destruction)
- C3 lining is not broken during installation, ice chipping, falling heavy objects

PREFABRICATED STAIRS MADE OF COMPOSITE STEPS ON A METAL FRAME

We manufacture treads with risers on a unique construction where you can assemble a stair of any length from 3 to 10 steps.

Simple assembly with Anti-Slip surface manufactured with durable materials will serve your home with safe access for years.
